

We Build Custom Travel Portals

Options Travel will custom built a travel portal to house the online booking tool as well as all of your company's important travel information. This information can be accessed 24 hours a day from any computer. We will create a specific website that will be the one stop shop that your travelers will rely on to build and manage profiles, reference company travel policy, book online, ask a question or check in for their flight and access many other useful sites and references. We will secure and host the travel portal on a customized website domain. Below is an example layout of a travel portal that utilizes the customized online booking tool, dedicated agents, dedicated phone numbers, email address and live chat support.

The screenshot shows a web portal layout with a blue header and a white main content area. The header contains a placeholder for the company logo, a welcome message, and contact information. A navigation bar below the header lists menu items. The main content area is divided into three columns: a left sidebar with contact and support information, a central booking box with a sign-in button, and a right sidebar with travel advisories.
